4th key feature - the least popular sport horse riding and racing in both terms/aspects/respects/regards.

It is basketball that +verb - cleft sentence

Main body 1: watching

Main body 2L participating

The bar chart compares the percentage terms of women at the age of 16-25 in a certain country playing sports or watching sports.

In general, watching sports is more popular than participating across all sports, except in golf and badminton. The most watched sport remains to be tennis among females, whilst it is basketball that is most participated by females. Notably, the least popular sports in both regards - watching and participating - are horse riding and racing.

Tennis easily tops the ranking of most watched sports (60%), while the percentage of basketball follows in second with a margin of 5 percentage points. Other sports are watched comparatively less: gymnastics is watched by 20% females aged 16-25, while the percentage of golf makes up twice less of that. **A similar watching percentage is observed** in badminton, and horse riding and racing, accounting for 5% **at the end of the spectrum.**

However, **figures relating to participating percentages vary=differ quite noticeably.** The percentage of basketball ranks first in this category (50%), while a second place is shared by both tennis and golf with a similar percentage of 30%. Another most participated sport is badminton, standing at just above 10%, with gymnastics at 9% in the fourth place. The lowest percentage in this category is **again** responsible for horse riding and racing, at a mere 2 %.
